Project description:

This programme foresees consulting services that will help with the successful implementation of the project "Municipal Water Infrastructure Project of Chernivtsi, stage 1". Within consulting services design and tender documentation should be developed, support during tendering, construction supervision and the defect notification period provided. The programme also provides for an institutional component. The institutional component of consulting services facilitates the acquisition of experience, which can be further disseminated among other enterprises of the water supply and sewerage system and the strengthening of the institutional capacity of ME "Chernivtsivodokanal"

Expected results:

The program will contribute to the protection of water resources (the MDG 7) and save of local infrastructure, and reducing the cost of drinking water and wastewater to improve living conditions (including MDGs 1, MDGs 4). In line with EU Neighborhood Policy, the project also helps to modernize the municipal drinking water and wastewater disposal system in Chernivtsi in line with EU standards.
